Call For Papers
Workshop on Managed Many-Core Systems (MMCS'09)
http://www.cercs.gatech.edu/mmcs09/
co-located with ASPLOS'09
March 7th 2009 - Washington, DC

Multi-core architectures (e.g., quad-cores) are now mainstream, and many research projects are exploring a future where multi-cores have evolved into many-cores architectures with hundreds to thousands of cores. This future requires a thorough rethinking of programming models and their supporting software stacks, to allow applications to make effective use of the computational power of these architectures.

This workshop addresses software challenges in homogeneous and heterogeneous many-core systems. Current approaches to resource management and virtualization are based on small-scale SMP architectures, and they fall short in terms of high-end scalability and support for heterogeneity and fine-grain parallelism. We aim at assessing new needs and their corresponding approaches, abstractions, and mechanisms for resource management issues such as scheduling, synchronization, caching, power management, and system monitoring.

We welcome both technical papers, describing ongoing research and preliminary insights, and position papers that introduce and argue for novel views.

Topics of interest include:
* hypervisor structuring for many-core platforms
* power management for many-core systems
* support for heterogeneous cores
* resource management in large scale systems
* deployment of specialized cores as accelerators
* specialized execution domains (e.g., I/O)
* operating system abstractions for many-core platforms
* driver applications and benchmarks

Relevant Dates:
Position Papers due: February 9th, 2009
Notification to Authors: February 23th, 2009
Final program available at website: March 1st, 2009

Submission guidelines to be found at http://www.cercs.gatech.edu/mmcs09/

General Chair
Dilma Da Silva, IBM TJ Watson Research Center

Program Co-Chairs
Milan Milenkovic, Intel
Karsten Schwan, Georgia Tech

Program Committee
Ron Brightwell, Sandia National Labs
Muli Ben-Yehuda, IBM Haifa Lab
Dilma Da Silva, IBM Research
Peter Dinda, Northwestern University
Alexandra Fedorova, Simon Fraser University
Renato Figueiredo, University of Florida
Ada Gavrilovska, Georgia Tech
Gernot Heiser, University of New South Wales, Australia
Ravi Iyer, Intel
Orran Krieger, VMware
Jack Lange, Northwestern University
Milan Milenkovic, Intel
Himanshu Raj, Microsoft
Karsten Schwan, Georgia Tech
Michael Swift, University of Wisconsin
Vanish Talwar, HP Labs
Dongyan Xu, Purdue University
